

The professional connection

With matching connection parts for your vacuum pump clearly arranged according to typical applications and laboratory equipment.

www.vacuubrand.com

The professional connection

Our vacuum pumps fit your laboratory device.

VACUUBRAND products can be easily used for various applications with laboratory equipment from all well-known manufacturers. All you need to connect our pumps are the right connectors. The selection of the connection parts

depends on the type of application and the vacuum connection of your laboratory device. With the help of this brochure you can quickly and easily find out which connection parts you need for your application.

Note: Connections should be checked again in the event of technical changes to the laboratory equipment.

Version: 05/2021

Trademark-Index

VACUU-LAN® (US-Reg.No 3,704,401), VACUU-BUS®, VACUU-CONTROL®, VACUU-SELECT® (US-Reg.No 5,522,260), VARIO® (US-Reg.No 3,833,788), VACUUBRAND® (US-Reg.No 3,733,388), VACUU-VIEW®, GREEN VAC® (US-Reg.No. 4,924,553), VACUU-PURE® (US-Reg No. 5,559,614) and also the shown company logos are registered trademarks of VACUUBRAND GMBH + CO KG in Germany and/or other countries.

Overview of all connection parts	22

How to find the right connection parts:

- 1 Select your application from the table of contents.
- 2 Look for the type / size of the vacuum connection or brand and type of your laboratory device in the first column.
- 3 Look for the VACUUBRAND vacuum pump you are using in the second column.
- 4 In the third column, read off the corresponding connection parts required.

Example using freeze drying as an application:

* Third-party trademarks depicted or reproduced herein are the property of their respective trademark owners.

Find the right vacuum pump

Diaphragm pumps

Most chemical applications take place in the rough vacuum range (down to 1 mbar). For such processes, diaphragm pumps are always the best choice. Diaphragm pumps run oil-free, do not consume any water and therefore do not generate either waste water or waste oil. This pump technology is also available in a chemically resistant version. At VACUUBRAND all wetted parts of chemical diaphragm pumps are made of fluoroplastics with excellent chemical resistance. The reliability, durability and ease of maintenance of the chemistry diaphragm pump make it an ideal choice for the chemical laboratory.

Rotary vane pumps and chemistry-HYBRID pumps

However, for some applications a vacuum of 1 mbar is not sufficient. Freeze drying or Schlenk lines, for example, require a pressure in the fine vacuum range (down to 10^{-3} mbar). Due to the technology used, diaphragm pumps reach their limits here. For this reason, rotary vane or chemistry-HYBRID pumps are often used, which can achieve an ultimate vacuum of 2×10^{-3} mbar. A disadvantage compared to the diaphragm pump is the need to use oil for lubrication and sealing, which can disrupt sensitive processes and has to be changed regularly. In addition, rotary vane pumps are not available in a chemical-resistant version. Many parts are made of metal and can corrode if they come into contact with chemicals. In addition, the oil can degrade. In such cases, for better protection against corrosion, VACUUBRAND offers the chemistry-HYBRID pump. This consists of a rotary vane pump combined with a chemical-resistant diaphragm pump that permanently evacuates the oil chamber during the process and thus frees it from corrosive vapors and condensates.

Screw pumps

VACUU·PURE® is ideal for clean processes and pure products in the vacuum range down to 10^{-3} mbar.

A dry and hydrocarbon-free vacuum is indispensable for many applications such as in ultrahigh vacuum systems.

As a dry fore vacuum pump for turbomolecular pumps, VACUU·PURE® offers a deep ultimate vacuum that was previously unreachable with oil-free technologies.

Drying processes, manipulation of oxygen- or moisture-sensitive compounds, distillations, and even coating processes can be run with the dry screw pump without downtime for maintenance. Common applications include freeze drying and Schlenk line. VACUU·PURE® can be operated continuously at higher pressures so that in drying processes, both the primary drying and subsequent residual drying steps can be performed with a single pump.

VACUU·PURE® easily handles high vapor loads through its high condensate compatibility. A gas ballast is therefore not

necessary. The associated disadvantages such as decline of the ultimate vacuum and increased noise levels are thus avoided. The integrated regeneration mode enables rapid drying of the pump after the end of the process and thus the sample throughput can be significantly increased, as compared to other pump technologies.

The chemically resistant version VACUU·PURE® 10C is especially designed for pumping aggressive gases and vapors. The operation of a cold trap is unnecessary in the majority of applications.

Find the right vacuum pump

Mounting parts

Modern diaphragm pumping units have a so-called „condensate separator“ (AK) at the pump inlet, which protects the pump from entrained condensate droplets and solid particles. In addition, an „emission condenser“ (EK) on the exhaust side protects from solvent emissions and enables their efficient recovery.

Due to the lower chemical resistance of rotary vane pumps, it may be necessary to install a cold trap in order to catch corrosive chemicals and condensates before they enter the pump inlet. To protect the health of laboratory personnel, oil mist filters are often used at the pipe exhaust, which prevents indoor air pollution with oil vapors.

Vacuum control

A system with vacuum control is recommended for applications in which it is necessary to maintain certain pressure values or process conditions.

VACUUBRAND uses the VACUU-SELECT® vacuum controller for this. The vacuum control can be achieved in two ways. Switching an electromagnetic valve in the suction line works regardless of the vacuum source. With this classic two-point control method, the vacuum is regulated by opening and closing an electromagnetic valve, thus maintaining the pressure range between the two valve switching points. In contrast, adaptive speed control is very precise. However, this process only works in combination with a VARIO® diaphragm pump. The precise VARIO® control offers the advantage of maximum process efficiency, shorter process times as well as reproducible process control and results. In addition, the pump does not run at full capacity all of the time, but only as fast as necessary. This results in significant energy savings, reduced wear and tear and lower noise emissions.

There is also an „automatic evaporation“ option available for evaporation processes. With just one push of a button, the controller automatically finds the boiling pressure and adjusts it continuously throughout the evaporation process. The process is carried out fully automatically and in the shortest possible time, without the need for constant monitoring and manual intervention.

How to find the right vacuum pump

The choice of the right vacuum pump depends very much on the application and the type and amount of media used. To make your choice easier, VACUUBRAND has developed a Vacuum Pump Selection Guide. With only a few details about your application this online tool helps to focus in on the suitable products, which you can then easily compare at a glance. Test it yourself at:

www.vacuubrand.com/vpsg

Of course, we would also be happy to advise you personally.

You can find the right contact person for your region at:

www.vacuubrand.com/contact

www.vacuubrand.com/vpsg

Note: In many applications it is necessary to connect the outlet of the vacuum pump to an exhaust system. This prevents, for example, the pumped media and chemicals from getting into the ambient air. A suitable exhaust hose must be selected for this. Make sure that the exhaust hose is of the correct dimensions to ensure that no back pressure can build up. Please also pay careful attention to the corresponding information in the operating instructions for the vacuum pump. If you cannot find a suitable exhaust hose, we will be happy to advise you.

 Hose nozzle DN 6

VACUU-PURE 10
 Screw pump
 10 m³/h, 5 x 10⁻³ mbar
 Vacuum connection:
 Small flange DN 25

Oil-free vacuum for reactors and synthesis applications

PC 3003 VARIO select

Chemistry diaphragm pump

2.8 m³/h, 0.6 mbar

Vacuum connection:

Hose nozzle DN 8-10

PC 3010 VARIO select

Chemistry diaphragm pump

13.0 m³/h, 0.6 mbar

Vacuum connection:

Small flange DN 25

VACUU-PURE 10C

Screw pump

9 m³/h, 5 x 10⁻³ mbar

Vacuum connection:

Small flange DN 25

Fine vacuum distillation

RC 6

Chemistry-HYBRID pump

5.9 m³/h, 2 x 10⁻³ mbar

Vacuum connection:

Small flange DN 16

VACUU-PURE 10C

Screw pump

9 m³/h, 5 x 10⁻³ mbar

Vacuum connection:

Small flange DN 25

Connections are individual and not standardized. Please contact VACUUBRAND:

Nomenclature

VACUUBRAND pumps

The names of the VACUUBRAND pumps are intended to provide a first support to the technical design. More detailed information can be found in the technical specifications of the pumps.

M	Diaphragm (membrane) pump	R	Rotary vane pump
	The letters E, Z, D, V complete the name of a diaphragm pump and indicate the internal configuration and the ultimate vacuum that can be achieved with it:		The letters E, Z complete the name of a rotary vane pump and indicate the internal configuration and the ultimate vacuum that can be achieved with it:
	E = single stage (attainable ultimate vacuum typical 70 mbar)		E = single stage (attainable ultimate vacuum typical 10^{-1} mbar)
	Z = two stages (attainable ultimate vacuum typical 7 mbar)		Z = two stages (attainable ultimate vacuum typical 10^{-3} mbar)
	D = three stages (attainable ultimate vacuum typical 1.5 mbar)		
	V = four stages (attainable ultimate vacuum typical 0.6 mbar)		
C	Chemistry design, with fluoropolymer flowpath	EK	Exhaust vapor (emission) condenser for nearly 100 % solvent recovery in compact design, protecting environment and lab air
PC	„Pumping Unit, Chemistry“ – a chemistry pump with vacuum control and solvent recovery	NT	Labels the series of pumps comprising the New Technology
AK	Separator catchpot for inlet or outlet condensates, collects particles and droplets, keeps condensate in vacuum line from flowing into the pump, protecting pump performance and providing additional noise reduction on the pressure side		

Connection parts

DN	Nominal diameter
KF	Small flange
SW	Hose nozzle

Example:

MD 12C +AK +EK is a diaphragm (membrane) pump, with three stages (ultimate vacuum in the range down to 1.5 mbar), with about 12 m³/h, chemistry design, which has a condensate separator and an exhaust vapor (emission) condenser.

Overview

Clamping rings and centering rings	Ord. no.
Clamping ring for KF DN 10/16, aluminium	20660000
Clamping ring for KF DN 20/25, aluminium	20660001
Clamping ring for KF DN 10/16, stainless steel	20660010
Clamping ring for KF DN 20/25, stainless steel	20660011
External centring ring for KF DN 10/16 PBT (non-wetted) with sealing ring NBR	20660190
External centring ring for KF DN 20/25 PBT (non-wetted) with sealing ring NBR	20660191
External centring ring for KF DN 10/16 PBT (non-wetted) with sealing ring FPM	20660195
External centring ring for KF DN 20/25 PBT (non-wetted) with sealing ring FPM	20660196
Centring ring aluminium, sealing ring FEP KF DN 10/16	20635065
Centring ring aluminium, sealing ring FEP KF DN 20/25	20635722

Small flanges	Ord. no.
Small flange DN 10 with hose nozzle DN 6, aluminium	20662500
Small flange DN 16 with hose nozzle DN 6, aluminium	20662510
Small flange DN 16 with hose nozzle DN 10, aluminium	20662511
Small flange DN 25 with hose nozzle DN 8, aluminium	20662516
Small flange DN 25 with hose nozzle DN 10, aluminium	20662517
Small flange DN 25 with hose nozzle DN 12, aluminium	20662518
Small flange DN 25 with hose nozzle DN 15, aluminium	20662519
Small flange DN 16 with hose nozzle DN 10, plastic PP	20662806
Small flange DN 25 with hose nozzle DN 10, plastic PP	20662807
Small flange DN 25 with hose nozzle DN 15, plastic PP	20662808
Small flange DN 10 with hose nipple DN 12, aluminium	20662530
Small flange DN 16 with hose nipple DN 19, aluminium	20662531
Small flange DN 25 with hose nipple DN 19-20, aluminium	20662532
Small flange DN 25 with hose nipple DN 25, aluminium	20662533

Overview

Reducing pieces	Ord. no.
Reducing piece with KF DN 25/10, aluminium	20669040
Reducing piece with KF DN 25/16, aluminium	20669041
Reducing piece with KF DN 25/10, stainless steel	20672910
Reducing piece with KF DN 25/16, stainless steel	20672911

Tubing	Ord. no.
Vacuum tubing made of stainless steel KF DN 16, length 250 mm	20673306
Vacuum tubing made of stainless steel KF DN 16, length 500 mm	20673316
Vacuum tubing made of stainless steel KF DN 16, length 750 mm	20673326
Vacuum tubing made of stainless steel KF DN 16, length 1000 mm	20673336
Vacuum tubing made of stainless steel KF DN 25, length 250 mm	20673307
Vacuum tubing made of stainless steel KF DN 25, length 500 mm	20673317
Vacuum tubing made of stainless steel KF DN 25, length 750 mm	20673327
Vacuum tubing made of stainless steel KF DN 25, length 1000 mm	20673337
Vacuum tubing made of PVC with internal spiral KF DN 16, length 1000 mm	20686020
Vacuum tubing made of PVC with internal spiral KF DN 25, length 1000 mm	20686021
Vacuum tubing made of PTFE with KF DN 16, length 1000 mm	20686031
Vacuum tubing made of PTFE with KF DN 25, length 1000 mm	20686033
Vacuum tubing made of rubber DN 6 mm, available per meter	20686000
Vacuum tubing made of rubber DN 8 mm, available per meter	20686001
Vacuum tubing made of rubber DN 10 mm, available per meter	20686002
Vacuum tubing made of rubber DN 15 mm, available per meter	20686003
Vacuum tubing made of rubber DN 20 mm, available per meter	20686005
Vacuum tubing made of PVC with internal spiral KF DN 16/25, 1m	20686040
Vacuum tubing made of PVC with internal spiral KF DN 25/25, 1m	20686041
Adapter hose nozzle DN 10 mm to hose nozzle 1/2" (DN 12 mm)	20636002

VACUUBRAND®

VACUUBRAND is part of the Brand group, a manufacturer of high-quality and innovative laboratory equipment and vacuum technology with a global team of approx. 1,000 employees.

With highly motivated and qualified employees, we manufacture the world's most comprehensive product family for vacuum generation, measurement and control for the rough and fine vacuum range in the laboratory.

All with one goal:

Enabling our customers to run reliable, safe and efficient processes. This is why we commit ourselves to continuous innovation, first-class performance, and outstanding quality.

Engineering excellence is central to our ability to deliver products and solutions renowned for their quality, durability, and reliability. Innovative technology, high quality materials and extensive testing deliver unmatched performance - engineered and manufactured in Germany.

Together with you, our experts will find the best solution for your application and provide you with first-class service along the way.
